

PROJECT OVERVIEW
SMALL BUSINESS INVENTORY SYSTEM for

Client:	DV Retail Store
Project Type:	Software Implementation Simulation
Role:	Implementation Specialist/Data Analyst
Tools:	SQLite, SQL, Excel, CSV, Power BI, Microsoft Word

Project Objective	The objective of this project is to design and implement a simple inventory system and reporting solution that will allow DV Retail Store to: • Maintain product information • Monitor inventory levels • Identify low-stock product • Track sales transactions • Calculate inventory value • Analyze sales by product and category • Provide management with an easy-to-understand Power BI dashboard
--------------------------	---

Expected Outcome	The implementation will equip the client to centralized dataset and Power BI dashboard that can used to monitor inventory review sales performance, identify products requiring replenishment, and support day-to-day operational reporting.
--------------------------------	---

➤ **Portfolio Note:**

This is a fictional implementation project, created for the purposes of portfolio demonstration. DV Retail Store is not a real client. This project reflects my hands-on skills in software implementation, data preparation, SQL, reporting, testing, documentation, and client-oriented support.
